Printing and putting it together

1. Print the fit test (ship-tolerance-test.stl in the base set) first. If a peg is loose, scale it up 0.5 to 1% in your slicer. If it's tight, sand it a bit.
2. Lay each cannon so the flex arm's layers run across the bend, and print a spare or two.
3. Print the masts lying flat.
4. Stretch a thin rubber band around each wheel's rim and push the wheel into the slot under the stern. It should be snug but still spin, and it stays in.
5. Plug the fittings into the deck. Each hit knocks one off, and a bare hull sinks on the next hit.
6. Slide the sails down over the masts, and a paper flag into the slot at the top of a mast.
7. To fire, plug a cannon into an open slot, drop in a cannonball and press the arm down.
8. Islands sit right on the table. A short mast in the hole flies your flag.

What a game needs

Each player brings a fleet printed from its list, 20 coins, one or two islands with a short mast each, the faction card and some paper flags.

The table needs 2 to 6 rocks and reefs. With three or more players, put a rock at each end of every fleet's line. Add the wind dial if you play Trade Winds. A 6 ft round table or a 6 or 8 ft folding table works well.

You also need a thin rubber band for every wheel and a cloth bag for the coins.
